

REMUSNET
Norrec Nieh
CS5008 Final Project

<< **QUICK START** >>

=====

1. Run the server (remus.c) and client (romulus.c) concurrently to simulate the honeypot.

- a) Run ``remus.c`` in the ``server_client`` directory.

The terminal should read: "Listening."

- b) Run ``romulus.c`` in the ``server_client`` directory.

The server will prompt the client to enter a username, and then a password.
This will repeat twice before the server ends the connection.

2. Run the log parser.

- a) Run ``parserMenu.c`` in the ``parser`` directory.

- b) Choose menu option 1 to populate the session array.

Enter ``remusLog.txt`` when prompted for a file.

- c) The data is ready to be parsed!
(See the manual for details about the menu options.)
